

Higher derivative extension of the functional renormalization group

Thursday, 25 November 2021 16:45 (1h 15m)

We study higher derivative extension of the functional renormalization group (FRG). We consider the general form of the FRG equations for a scalar field that include higher functional derivatives with respect to the field. We show that the epsilon expansion around the Wilson-Fisher fixed point is indeed reproduced by the local potential approximation of the general FRG equations.

Presenter: TANAKA, Gota (Shizuoka University)
